ONE MONTH CONTENT PLAN

4 posts per week | Tuesday – Friday | Times in IST

WEEK 1 — Establishing the Problem

DAY	TIME	PILLAR	TOPIC
Wed	11:00 AM	Education	If I have to translate your app before I translate my document, I am already gone.
Thu	12:30 PM	Provocation	The legal industry does not have a technology problem. It has a boundary problem.
Fri	11:30 AM	Product	10 free pages. No credit card. No walls. Just upload and go.

WEEK 2 — Building Authority

DAY	TIME	PILLAR	TOPIC
Tue	12:00 PM	Story	Page 49 of Google search. Most people stop at page 2. I kept going because I had no other choice.
Wed	11:00 AM	Education	The difference between a document translator and a PDF translator.
Thu	12:30 PM	Provocation	Paying an agency three weeks and \$300 for something Lekhak does in five minutes.
Fri	11:30 AM	Product	22 Indian languages. 100+ global languages. One upload.

WEEK 3 — Deepening the Conversation

DAY	TIME	PILLAR	TOPIC
Tue	12:00 PM	Story	An import manager whose team spent two days every week translating shipment documents.
Wed	11:00 AM	Education	What OCR actually does and why document condition matters more than language.
Thu	12:30 PM	Provocation	Most document tools were built for perfect documents. Real documents are never perfect.
Fri	11:30 AM	Product	Legal documents. Immigration files. Academic research. Financial reports. One tool.

WEEK 4 — Converting Attention to Action

DAY	TIME	PILLAR	TOPIC
Tue	12:00 PM	Story	I speak English. I have spoken it my whole life. And sometimes it is still not enough.
Wed	11:00 AM	Education	How OCR handles faded ink, skewed scans, and handwritten text. Explained simply.
Thu	12:30 PM	Provocation	The moment your tool stresses someone out more than their problem, it has already failed.
Fri	11:30 AM	Product	Month one. What professionals actually need from a document translation tool.

6/5/2026	Week 1	Wed	 11:00 AM	If I have to translate your app before I translate my document, I am already gone.	If I have to translate your app before I can translate my document, I am already gone. Three seconds. That is how long someone spends on your page before they decide whether you are worth their time. Most document translation tools are losing people in two. Here is the problem nobody wants to say out loud. The people who need document translation are never relaxed when they arrive. They are a lawyer with a deadline. A researcher with a manuscript nobody else could read. A business owner whose deal is stalled over a file in the wrong language. They did not come to learn your product. They came because something urgent needed solving right now. So the moment your interface adds confusion on top of that urgency, you are not just losing a user. You are failing someone at the exact moment they needed help the most. The best translation tool is not the most powerful one. It is the one that gets out of your way the fastest. Upload. Translate. Done. That is the only promise that matters when someone comes to you already under pressure. How many tools have you closed in the first three seconds because they made your problem harder before making it easier? #DocumentProcessing #LegalTech #OCR #AITranslation #Lekhakh	Visual
7/5/2026	Week 1	Thu	 12:30 PM	The legal industry does not have a technology problem. It has a boundary problem.	The legal industry doesn't have a technology problem. It has a boundary problem. There is something worth respecting about a field that preserves its standards. Hard copies. Physical records. Filed documents. That discipline has saved cases. There are verdicts won today because someone kept a document from fifteen years ago that a digital system would have deleted. That is not backwardness. That is institutional memory. But there is a difference between preserving what works and refusing to identify what is slowing you down. A client waiting three weeks for a document review that AI completes in three hours is not experiencing tradition.	Visual

					They are experiencing neglect dressed up as protocol. Legal tech is not asking law firms to abandon their values. It is asking them to stop letting those values become an excuse for slowness that real people pay the price for. What is one area in your industry where preserving the past has quietly become an excuse for not moving forward? #LegalTech #AITools #DocumentProcessing #Lekhah	
8/5/2026	Week 1	Fri	 11:30 AM	10 free pages. No credit card. No walls. Just upload and go.	Nobody gives you ten free samples before asking for your money. Not in real life. Not in business. Not anywhere. But a bakery that believes in what it bakes hands you a sample before you spend a coin. Not because they are desperate. Because they already know what happens the moment you taste it. That is exactly why we give you ten free pages. Upload your document - the faded one, the scanned one, the one every other tool already rejected. See what happens when an AI built specifically for difficult documents gets its hands on it. We already know what you will see. And that moment does not need a sales pitch. Try ten pages free at lekhah.app. No credit card required. What is the one tool you wish had let you try before you paid? Drop it below. #AITranslation #LegalTech #DocumentProcessing #Lekhah	Visual
12/5/2026	Week 2	Tue	 12:00 PM	Page 49 of Google search. Most people stop at page 2.	Page 49 of Google search. Most people stop at page 2. I kept going because I had no other choice. I needed a tool that could handle my document. One specific thing. Nothing complicated. Every result on the first page said free. And every single one, the moment you got inside, had the same wall waiting. Premium. Payment. Upgrade to continue. I was not looking for free because I was cheap. I was looking for free because that was the only option I had. And I needed it to work. Right then. Not tomorrow. So I kept scrolling. Page after page. Until I found one buried so deep it barely looked like a real product. No brand name. No logo. No design to speak of. Just a plain interface that looked like a developer started it and walked away. I uploaded the file. It worked. No payment wall. Just done. I never searched for another tool again.	Visual

					That is the thing nobody talks about when building document tools. People do not plan to need them. They show up in the middle of something urgent, something that cannot wait, and they need an answer immediately. Not a pricing page. An answer. The tools that understand this are the ones people never leave. Lekhak was built for that exact moment. The scanned document nobody else can read. The faded file from thirty years ago. The urgent translation that cannot wait three days for an agency. No walls. Just done. What is the one tool you found at the worst possible moment that you have never stopped using since? #LegalTech #AITranslation #DocumentProcessing #Lekhak	
13/5/2026	Week 2	Wed	 11:00 AM	The difference between a document translator and a PDF translator.	Most people think document translation is just text translation. It is not even close. Translating text means converting words. That is it. You paste something in, you get words back in another language, and whatever structure existed before is gone. Translating a document is a completely different job. Think about an Indian student applying to a university abroad. Their certificates and transcripts were issued physically in Hindi. To apply, those documents need to be translated into English, but not just the words. The official layout, the structure, the formatting, everything that makes the document look legitimate in a professional setting has to stay exactly as it was. A university does not accept scattered text. They accept documents. This is where most translation tools fail. They handle clean, typed text well. But hand them a scanned certificate, a physically issued document, something in PDF format that cannot simply be edited like a Google Doc, and they fall apart. The translation comes back but the document looks nothing like the original. Lekhak was built specifically for this gap. It does not just translate what is written. It preserves what was built. The layout. The structure. The formatting. Everything intact, in the language you need, looking exactly the way it did when it was first issued. Because a translated document that does not look official is not a translation. It is just words on a page. Have you ever had a document translation come back completely scrambled? What did that cost you? #DocumentProcessing #AITranslation #LegalTech #OCR #Lekhak	Visual
14/5/2026	Week 2	Thu	 12:30 PM	Paying an agency three weeks and \$300 for something Lekhak does in five minutes.	The money was not the painful part. It was finding out it was easy all along. Most people who have paid an agency to translate documents did not lose sleep over the bill. They lost sleep over the moment they	Visual

					discovered the same job could have been done in five minutes, at a fraction of the cost, from their own laptop. That feeling has a name. It is not regret. It is not frustration. It is the specific anger of not knowing. And the first thing that comes out of your mouth at that moment is always the same thing. I wish I had known. So here is the thing about you seeing this post right now. You know Lekhak exists. You know it translates scanned documents, faded files, complex legal paperwork, in minutes, not weeks. You know agencies are charging three weeks and hundreds of dollars for something that takes five minutes here. You cannot say I wish I had known anymore. So the next time a document lands on your desk that needs translating, the question is not where do I find someone to do this. The question is why would you go anywhere else. What is something you paid a premium price for that you later found out was dead simple to do yourself? #LegalTech #AITools #DocumentProcessing #Lekhah	
15/5/2026	Week 2	Fri	 11:30 AM	22 Indian languages. 100+ global languages. One upload.	Language should not be the thing that stops you from where you are trying to go. But for millions of people, it is. Not because they cannot speak the language of the place they are moving to. Not because they are not qualified enough. Not because the opportunity is not there. Because their documents are in the wrong language. A student from India with a first class degree wants to apply to a university in Germany. Their transcripts are in Hindi. Their certificates were issued in a language Germany does not recognize for admission. The dream is real. The qualification is real. The barrier is a document. This is what Lekhak was built to remove. Not just translating words but making sure that whoever you are and wherever your documents come from, they can speak the language of wherever you are trying to go. 22 Indian languages. 100+ global ones. Every format. Every structure. Preserved exactly as it was, just in the language you need it in. Because the world is bigger than the language your certificates were printed in. And your dreams should not stop at a document. Try it free at lekhak.app	Visual

					What is one place in the world you would go to if language was never a barrier? Drop it below. #AITranslation #DocumentProcessing #LegalTech #Lekhah	
19/5/2026	Week 3	Tue	12:00 PM	An import manager whose team spent two days every week translating shipment documents.	Every brand in India is trying to go global. Not when they become a big firm. Not when they hit a certain revenue. From day one. The small business owner in Mumbai reaching out to a client in Germany. The freelancer in Chennai sending proposals to agencies in the US. The startup in Bangalore onboarding their first international partner. They are all dealing with the same invisible wall. Documents in one language. Opportunities in another. And the tools that exist to solve this were built for large companies with large budgets. Enterprise contracts. Agency fees. Waiting days for a translated document that needed to go out yesterday. Nobody built something for the brand that is just starting. The one that needs something affordable, fast, and simple enough that one person can handle it without a team. That is exactly where Lekhak lives. Pay per page. No expensive subscriptions. Upload your document and get a clean, accurate translation in minutes. Whether you are a team of one or a company of fifty, the workflow is the same. Simple. Fast. Consistent. Because going global should not be a privilege for brands that are already there. It should be available from day one. At what stage did your brand start thinking globally? Drop it below. #AITranslation #DocumentProcessing #LegalTech #Lekhah	Visual
20/5/2026	Week 3	Wed	11:00 AM	What OCR actually does and why document condition matters more than language.	I uploaded a document to ChatGPT once. One of the most powerful AI tools in the world looked at it and said it could not read it. Not because the language was difficult. Because the document was. This is the problem nobody talks about with translation. There are hundreds of tools that can translate languages. The gap has never been the language. The gap has always been the document. Faded ink. Poor scans. Damaged paper. Handwritten text. Documents that have been folded, photocopied, and passed through ten hands before they reach you. These are the documents that matter most professionally. A detective working a criminal case that requires a record from fifteen years ago. A lawyer with a contract that was signed before digital filing existed. An immigration officer reviewing documents that were issued in a language and a condition that no standard tool can process. They cannot say the document is too difficult. The case still needs to be solved. The contract still needs to be reviewed. The application still needs to go through.	Visual

					This is what OCR was built for. Not perfect documents. The ones that have lived a life before they reached your desk. Lekhak was built specifically for this gap. Where every other tool gives up, including the most powerful ones, this is where Lekhak starts. What is the most difficult document you have ever had to work with? Drop it below. #OCR #DocumentProcessing #LegalTech #AITranslation #Lekhak	
21/5/2026	Week 3	Thu	12:30 PM	Most document tools were built for perfect documents. Real documents are never perfect.	A student goes to school because they do not know yet. That is the whole point. So when a lecturer looks at a class and says "you should already know this" before moving on, something has broken. The student is there precisely because they do not have it yet. If they already had it, they would not be in the room. The same thing happens with document tools. You upload a faded file, a poorly scanned certificate, a document that has lived through fifteen years of filing cabinets and photocopiers. And the tool looks back at you and says this is too difficult to process. But that is exactly why you came. If your document was already clean, perfectly formatted, crisp and digital, you would not need a translation tool. You would copy and paste it into Google Translate and be done in thirty seconds. The people who come to document translation tools are there because their documents are not perfect. That is the whole point of showing up. Most tools were built for perfect documents. They fail the moment reality walks in. Lekhak was built for reality. The faded ink. The bad scan. The document that every other tool sent back to you. We do not ask you to already have it sorted. We know that is exactly why you came. What is one tool or system that failed you the moment conditions were not perfect? #LegalTech #OCR #DocumentProcessing #AITranslation #Lekhak	Visual
22/5/2026	Week 3	Fri	11:30 AM	Legal documents. Immigration files. Academic research. Financial reports. One tool.	The first time a tool solves every problem you brought to it, you do not celebrate. You wait for the catch.	Visual

					That is how we are wired. The mind that has been disappointed enough times does not trust easily. So when something shows up and answers not just the one thing you came for, but everything else in that space that felt impossible before, the first response is suspicion. Maybe it only works this well the first time. Maybe the quality drops the more you use it. Maybe there is a limitation hiding somewhere that has not shown itself yet. So you watch. You test. You come back with harder documents, more complex files, more urgent deadlines. And it delivers. Every single time. That is when something shifts. The distrust that was once so loud goes quiet. And what replaces it is not just trust. It is the kind of trust that does not move. The kind that keeps people with a brand even when prices go up, even when alternatives appear, even when someone asks why they are still using the same tool. Because consistency did what no marketing ever could. This is what people mean when they say going back to another tool after Lekhak feels too hard. It is not habit. It is trust that was earned one document at a time. Legal files. Immigration paperwork. Academic research. Financial reports. One tool. Every time. What is one brand or tool you trust so deeply that nothing could make you switch? Tell us why. #AITranslation #LegalTech #DocumentProcessing #Lekhah	
12	Week 4	Tue	12:00 PM	I speak English. I have spoken it my whole life. And sometimes it is still not enough.	Some people speak English their whole lives. And still, in rooms that matter, it is not enough. Not because they do not understand the words. But because there is a difference between learning a language and growing up inside one. Walk into any government office, any courtroom, any bank in India where official proceedings happen in English, and watch what happens to someone who speaks Hindi or Tamil at home. Watch them navigate a system designed in a language that was handed to them. They are not unintelligent. They are not unprepared. They are just being asked to advocate for themselves in someone else's mother tongue. This is the problem that sits underneath every document translation request we receive. It is never just about converting words from one language to another. It is about making sure that a farmer in rural Maharashtra can read his own land document in Marathi. That a trader in Chennai can file a complaint in Tamil. That a student in Uttar Pradesh can submit an application in Hindi and be taken just as seriously as someone who submitted in English. That is not a translation feature.	Visual

					That is access. That is dignity. That is what 22 Indian languages on one platform actually means when you move past the product description and into the real lives of the people using it. Language should not determine how far someone goes. What is one system you have had to navigate in a language that was never really yours? #IndianLanguages #AITranslation #OCR #LegalTech #Lekhakh	
13	Week 4	Wed	11:00 AM	How OCR handles faded ink, skewed scans, and handwritten text.	Your eyes do something remarkable every time you read. They do not just see shapes on a page. They recognize them. They convert lines and curves into letters, letters into words, words into meaning. All of it in a fraction of a second without you thinking about it. That is exactly what OCR does for a computer. When you scan a document, the computer does not see text. It sees an image. Pixels. Light and dark patterns on a page. Without OCR, that scanned certificate is no different to a machine than a photograph of a tree. OCR teaches the computer to read. It looks at those pixels and recognizes the characters hidden inside them. And this is where most tools stop. Clean, crisp, perfectly scanned documents - they handle those fine. But what about the document that has been folded and unfolded fifty times? The ink that faded over fifteen years in a filing cabinet? The scan that came out slightly skewed because the paper was not flat on the scanner? The section that was filled in by hand? These are the documents that defeat standard OCR. Lekhakh was built with OCR trained specifically for these conditions. Faded ink. Damaged paper. Handwritten text. Skewed scans. The documents that have lived a life before they reached you. Because the most important documents are rarely the perfect ones. What is the oldest or most damaged document you have ever needed to use professionally? #OCR #DocumentProcessing #AITranslation #LegalTech #Lekhakh	Visual
14	Week 4	Thu	12:30 PM	The moment your tool stresses someone out more than their problem, it has already failed.	Document translation is never the whole journey. It is a pit stop. The person uploading that file is on their way somewhere. A court case. A university application. A business deal. An immigration approval. The translation is just one item on a list of ten things they need to get done before they reach their destination. They did not clear their schedule for it. They did not budget three hours for it. They stopped because they needed it done so they could keep moving.	Visual

					This is why a tool that adds stress at the pit stop does not just waste five minutes. It drains the energy someone needed for everything that comes after. When you show up to translate a document and the tool makes you jump through hoops before you can even upload the file, something breaks mentally. Not just frustration. The kind of exhaustion that makes the next ten things on the list feel heavier than they were before you stopped. The best pit stops are the ones you barely remember. You pulled in, you got what you needed, you left. The journey continued without losing momentum. That is the standard every document translation tool should be held to. Not impressive. Not feature-heavy. Just fast, clean, and completely out of your way. What is one tool that drained more energy than the problem it was supposed to solve? #DocumentProcessing #LegalTech #AITranslation #OCR #Lekhak	
15	Week 4	Fri	11:30 AM	Month one. What professionals actually need from a document translation tool.	Professionals do not come to Lekhak because they need a translation tool. They come because something they needed was blocked. A case that could not move forward without a document nobody could read. An application that stalled because the certificate was in the wrong language. A deal that sat on a desk for three weeks waiting for an agency that charged too much and delivered too late. A student whose qualifications were real but whose paperwork was not speaking the right language. The translation was never the point. The point was always what came after it. The case resolved. The application submitted. The deal closed. The student enrolled. Document translation is the link between where someone is and where they are trying to go. And for that link to work, it has to be fast, accurate, and completely out of the way of the person using it. That is what we are here for. Not features. Not technology for the sake of technology. Access. Speed. Dignity.	Visual

					If your documents have been the thing standing between you and where you are trying to go, that is exactly the problem Lekhak was built to remove. Try ten pages free at lekhak.app. No credit card required. What is one thing you wish document translation had made easier for you this year? Tell us below. #AITranslation #DocumentProcessing #LegalTech #IndianLanguages #Lekhah
